EMPLOYMENT

Associate Researcher	08/2026–Present
School of Mechanical Engineering and Mechanics, Eastern Institute of Technology, Ningbo, China Host: Shiyi Chen	
Adjunct Research Assistant Professor	04/2026—08/2026
School of Mechanical Engineering and Mechanics, Eastern Institute of Technology, Ningbo, China Host: Shiyi Chen	
Chief Operating Officer	05/2025–08/2026
Liii Network The company that develops Mogan/Liii STEM and Goldfish Scheme.	
Mentor of Group 3 in Lingnan-Yuanpei STEM Summer School	04/2026–07/2026
Peking University	

EDUCATION

Ph.D. in Department of Electrical and Computer Engineering	05/2025
University of Illinois Chicago, Chicago, IL Advisor: Shuo Han Thesis: “ <i>Helpers in Learning Systems</i> ”	
Bachelor in Department of Mathematics	07/2020
Southern University of Science and Technology, Shenzhen, China Advisor: Luchuan Liu	

RESEARCH INTERESTS

Reinforcement Learning; Optimization on Manifold; AI Agents;

Advisor: Anand D. Sarwate

Accepted to ICLR 2025

Industry Experiences

Maintainer: Goldfish Scheme & Mogan STEM

05/2024-08/2026

LIII NETWORK (An open-source company)

Founder: Da Shen; *Co-founder & COO:* **Yansong Li**

I am the co-founder and COO of LIII NETWORK, an open-source company that develops Goldfish Scheme: a Scheme interpreter with Python-like standard library functionalities. Goldfish Scheme is the foundation of Mogan STEM, a WYSIWYG $\text{\TeX}$ -style editor we developed. Mogan STEM can help you type equations 10 times faster than $\text{\LaTeX}$.

RESEARCH EXPERIENCES

Combining model-based & model-free reinforcement learning.

09/2020-03/2025

Project Organizer & Corresponding Author

We develop two algorithms that leverage gradient information from an estimated model to accelerate model-free training. The experiments are conducted on an additive nonlinear system with a linear estimated model (published in *LADC*) and in the *mujoco* environment with a Gaussian estimated model (under review for *AAAI* and *ICLR*).

Renaissance of Literate Programming in the Era of LLMs

10/2024-03/2025

Project Organizer & Corresponding Author

We developed a Scheme interpreter with Python-like standard library using literate programming. Most of the code is generated by LLMs by using the literate programming document as prompts. The technical report is available at <https://github.com/LiiiLabs/goldfish/releases/download/v17.10.9/Goldfish.pdf>, and the prompt engineering paper is under ICML review.

AI agent that can effectively collaboration with human

11/2021-2024/05

Project Organizer & Corresponding Author

We utilize stochastic game theory and Stackelberg game formulation. In our setting, human agents are not assumed to be rational, and their utility functions are unknown. Based on these constraints, we develop two algorithms: one for Stackelberg games and another for stochastic games, both designed to facilitate AI-human collaboration. Experiments are conducted in the Overcooked-AI environment. The results have been published in the *ACC* and the *AAMAS* extended abstract. Additionally, two papers extending this formulation to partial observations are available as open-access preprints and are currently under review.

LLM for end-to-end autonomous driving

05/2024-12/2024

Coauthor

We develop a hybrid system that leverages a large language model (LLM) to provide high-level instructions at low frequency, enhancing the generalization capability of a high-frequency onboard controller running on an iPhone for autonomous driving. This design mitigates the high-latency challenges of LLMs, making our experiments the first real-world implementation of LLMs in this context. The results have been published in the *CORL*. Ongoing research has been submitted to *CVPR* and is currently under review.

TEACHING EXPERIENCE

Southern University of Science and Technology:

SICP (Fall 2024)

OPEN SOURCE COMMUNITY

Mogan STEM

09/2022-Now

Maintainer

A WYSIWYG editor that can type equations 10 times faster than $\text{\LaTeX}$. See “A quick tour of $\text{\TeX}_{\text{\LaTeX}}$ ” for a 3-minute short introduction. Plugins I developed (vim-like keybindings and algorithm2e package) can be found in Jack’s Github.

Goldfish Scheme

07/2024-Now

Maintainer

A Scheme interpreter based on S7 Scheme and C++. This interpreter matches the speed and simplicity of S7 Scheme while offering improved support for Microsoft Windows. In Goldfish Scheme, we have implemented the complete set of features from R7RS and included many functionalities inspired by the Python standard library. Goldfish Scheme will be the foundation for GNU $\text{\TeX}_{\text{\LaTeX}}$ /Mogan in the future.
